## DETAILED ACTION

### *Response to Amendment*

1. This Office Action is responsive to the Amendment filed 11/14/03.
2. The Amendment filed 11/14/03 successfully overcomes the rejection set forth in paragraph 2 of the Office Action dated 6/23/03. Accordingly, this rejection is withdrawn.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 29-30, 36-45, 49-50, 52 and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO0/08158 (WO '158) in view of EP 0 665 449 (EP '449) for the reasons of record as set forth in paragraph 5 of the Office Action dated 11/1/02, and as further discussed below.

### *Response to Arguments*

4. Applicant's arguments filed 11/14/03 have been fully considered but they are not persuasive.

With respect to claims 29 and 44, Applicant argues that there is no description about the fluorine content being greatly reduced by the energy irradiation in either of the

cited references WO99/08158 and EP 0 665 449. However, WO99/08158 discloses that the photocatalyst-containing layer comprises a silicone resin binder, with the silicon resin having organic groups bonded to the silicon atoms, wherein upon irradiation the organic groups bonded to the silicon atoms in the silicon molecule are replaced with oxygen-containing groups, resulting in improved wettability (see column 13, line 66 to column 14, line 5 of US 6,294,313, which issued from the national stage application of Japanese-language WO99/08158). In a preferred embodiment the silicon molecule contains fluoroalkyl groups bonded to the silicon atoms (see column 15, line 23 to column 16, line 2 of US 6,294,313). While WO99/08158 does not disclose a maximum value of 10 parts per 100 or less for the remaining fluorine content of the irradiated part relative to the non-irradiated part, it would have been obvious to one skilled in the requisite art to arrive at the value of the present invention because it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art (*In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980)), and it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art (*In re Aller*, 105 USPQ 233).

***Allowable Subject Matter***

5. Claims 31-33, 46-48, 51 and 53 are allowed.

***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
